

ROHRER'S PRICE LIST

Fall Season 1957

"NEW" DUAL WHEAT

HIGH YIELDING VARIETY FOR PENNSYLVANIA

(Hessian Fly Resistant)

Get up to \$20.00 worth of pasture this fall and still harvest a normal crop of grain.

Dual wheat can be planted early (about Sept. 15th) and pastured this fall and still come through with a normal yield of grain under ordinary conditions.

You will sure want to try this amazing new variety. Order early. Supply limited.

FREIGHT PAID ON SHIPMENTS of 200 lbs. and OVER. No extra charge for bags.

PURE

DEPENDABLE

HIGH QUALITY

CERTIFIED THORNE WHEAT (Treated)

Beardless, stiff, straw, medium in height. Good Yielder. One of the most popular varieties. Does not lodge easily. Red chaff, smooth head. Good milling quality. Performs good on wide range of soil. Sow $1\frac{1}{2}$ bushels per acre; 2 bushels per acre on sandy soils.

CERTIFIED SENECA WHEAT (Treated)

Beardless, stiff straw, slightly taller than Thorne, excellent standability. Tests show a trifle higher in yield than Thorne on the better soils; carries a higher test weight per bushel than most varieties. Excellent milling quality. Produces exceptionally well on average to good soils. Sow $1\frac{1}{2}$ bushels per acre; 2 bushels per acre on sandy soils.

CERTIFIED PENNOLL WHEAT (Treated)

One of the newer varieties. Tall with very stiff straw, beardless. Produces high yields of both grain and straw. Considered one of the highest yielders in Pennsylvania. Sow $1\frac{1}{2}$ bushels per acre; 2 bushels per acre on sandy soils.

CERTIFIED DUAL WHEAT (Treated)

The only commercial variety that is resistant to Hessian fly. This variety has a dual purpose. It can be sowed early and pastured this fall and still come through with an excellent yield of good quality grain. In many cases Dual has outyielded other standard varieties of wheat here in Pennsylvania. This is a beardless variety with stiff straw of medium length. You will want to try this highly recommended new variety. Order now as supply is limited. Sow $1\frac{1}{2}$ bushels per acre; 2 bushels per acre on sandy soils.

CERTIFIED WONG BARLEY (Treated)

The most popular variety of winter barley. Beardless stiff straw—good variety for combining. Keep feed costs down by producing more of your own feed. Barley can be substituted for part corn in your feeding program. Sow 2 bushels per acre.

CERTIFIED HUDSON BARLEY (Treated) (Bearded)

This is one of the most promising varieties of winter barley. This variety originated in New York state. Hudson is superior in winter hardiness, disease resistance, and yield. It has stiffness of straw which gives it good standability. The grain carries a very high weight test. Sow 2 bushels per acre.

DU BOIS WINTER OATS (Treated)

This is one of the newer varieties. Stiff straw, medium height. Excellent yielder of good quality grain. One of the most winter hardy varieties of winter oats. Shows good resistance to disease. Recommended best for southeastern Pennsylvania, Maryland, Delaware, and New Jersey. Sow $2\frac{1}{2}$ bushels per acre.

LECONTE WINTER OATS (Treated)

A good popular variety. High yielder—medium straw length, slightly taller than DuBois but not quite as winter hardy. Use in same recommended area as DuBois. Sow $2\frac{1}{2}$ bushels per acre.

BALBO RYE (Pasture type)

This variety is recommended mainly for pasture. Produces earlier spring pasture than other varieties. Sow 2 bushels per acre.

TETRA PETKUS RYE

A superior type rye that produces a very high yield of large plump kernels. In many cases the yield of Tetra Petkus is nearly twice that of ordinary rye. Produces excellent pasture and can also be used for silage. Sow 2 bushels per acre.

ALFALFA

We have a good supply of Alfalfa, Certified Buffalo, Certified Ranger, Certified DuPuits, Certified Vernal. We recommend starting new fields of alfalfa during the month of August. If stands are wanted for three years or longer, we suggest that you sow either Certified Buffalo or Certified Ranger or Certified Vernal. These are wilt-resistant varieties; Ranger and Vernal are more winter hardy than Buffalo. Certified seed is more plentiful and prices are reasonable.

TIMOTHY

Our Timothy tests 99.60% pure or better. Practically free from weeds. The crop is large this year and prices are quite a bit lower. Order your Timothy along with your order for seed grains. We pay freight on orders of 200 lbs. or more.

PASTURE MIXTURE AND GRASSES

September is an excellent time to start permanent pasture. We generally have more moisture and cooler weather during this time and grasses do not burn out as soon while they are in that seedling stage until they become deeper rooted. Many of the voluntary weeds that come up are frozen out before the grasses can be choked. Our permanent pasture mixture contains Timothy, Kentucky 31 Fescue, Perennial Rye, Grass, Red Clover, Kentucky Blue Grass, Red Top, and Ladino Clover. Sow 20 pounds per acre.

GRAZERS—DELIGHT PERMANENT PASTURE

This is a highly tested formula of permanent pasture. Containing a large variety of valuable grasses and legumes, including Lincoln Brome grass, S-37 Orchard, Ladino Clover, Perennial Rye grass, Meadow Fescue, White Clover and Birdsfoot Trefoil, etc. Under ordinary conditions will furnish pasture from early spring to late fall. Sow 35 lbs. per acre. State if wanted for high land or low-land. Packed only in 35 lb. bags.
